

# Parking services

The need to limit the traffic in city centers is now a topic of wide discussion. Małopolskie Province acts in this regard, among others, by building transfer nodes with Park&Ride parking lots operating within the MKA system.

We have recently executed one investment of such type in Tarnow, but many more are planned for the future.

Cleaner air and less traffic in the streets of our region are the objectives we can fulfill only by joint action. Our role is to create places for you to leave your car knowing it will be safe. That is why we are building parking lots managed from the level of MKA systems – and its users will find the subscription offers developed by our partners very attractive.

When creating the MKA system, we also made it possible to leave a parking lot even if you lose your card or smartphone. Our system will identify you with your vehicle's license plate or your personal PIN number.
